

ENTRY POINT & SIGN IN

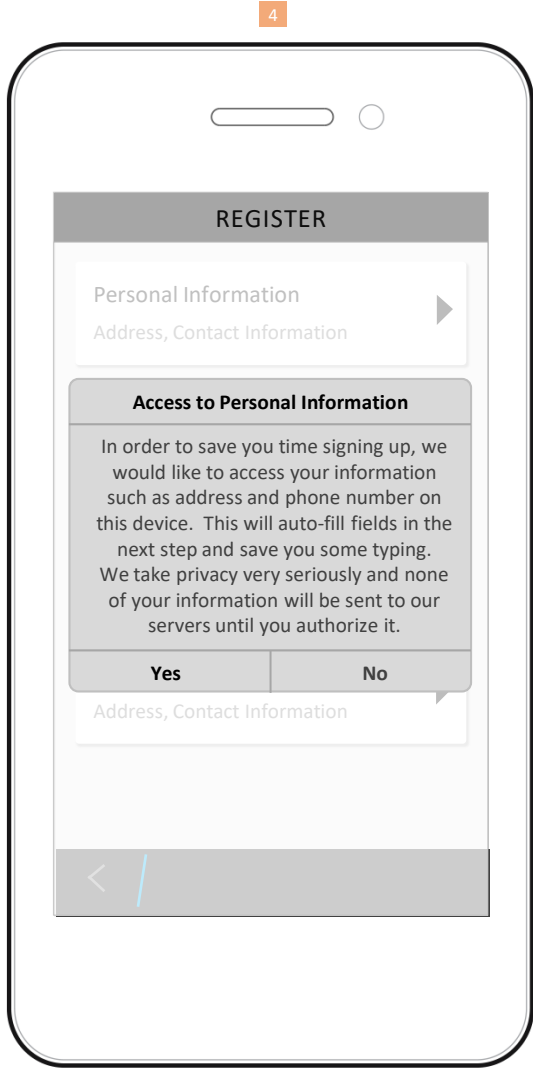

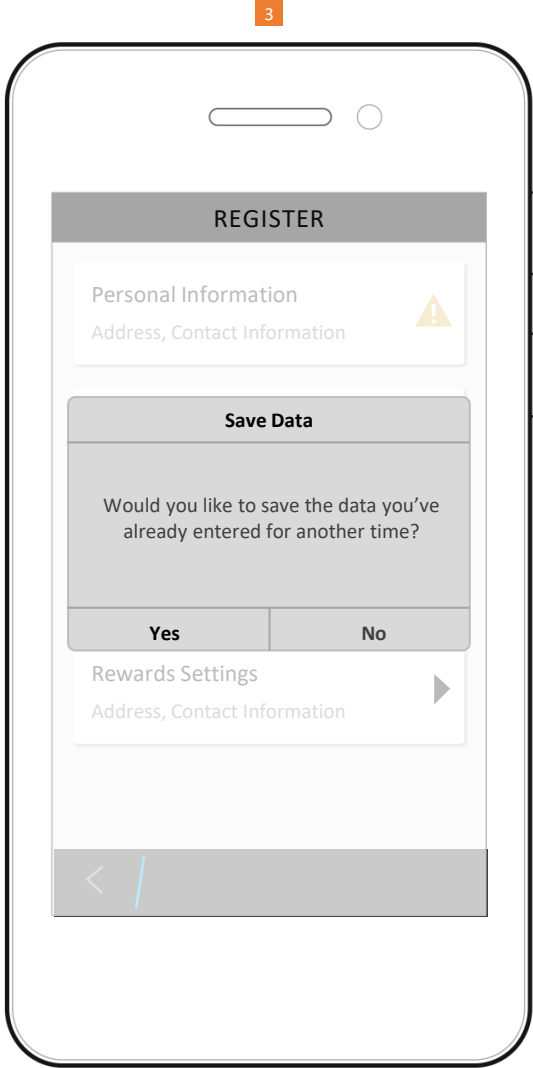

1 Browse as guest allows user to experience the app but any personalization will not work. User can still purchase services but will have to complete a check-out process.

REGISTER NEW USER

- 1 First page of registration shows the process broken down into sections. Tapping on a section takes the user to a corresponding screen to complete information. Each section will display an icon representing completion status.
- ✓ - Green checkmark signals everything is complete, validated and ready for submission.
 - ! - Yellow exclamation signals warnings but will not hinder successful registration. May result in reduced functionality
 - ✗ - Red 'X' signals an error that must be corrected. This type of error will prevent successful registration.
- 2 'Done' signature button will only display once all sections are completed or any combination of green checkmarks and yellow warnings.
- 3 Back button allows user to go back to home screen. Will display a dialog prompting user to save info already entered or blow it out.
- 4 Selecting Personal Information will first display a dialog asking the user for permission to use personal data already stored on the device to pre-populate fields.

REGISTER NEW USER: PERSONAL & PAYMENT INFORMATION

PERSONAL INFORMATION

Name:Required

Lucky the Leprechaun

Email:Required

lucky@thefightingirish.net

Password:Required

Any combination of letters & numbers

Country:

Pick from the list

Postal Code:

K1S 2N5

Province:

Manitoba

City:

Gloucestershire

Address:

Unit or apt followed by street address

Mobile Phone:

Enter numbers... we'll make it look pretty

Other Phone:

Enter numbers... we'll make it look pretty

<

Done

- 1

Country field is a drop-down box with Canada/US as first two picks.
- 2

Postal code and province labels will dynamically change depending on country value (zip/state). The Province drop-down box will dynamically populate based on country.
- 3

The value entered into postal code will be verified through PC database and pre-populate province, city and address.
- !

General Themes Throughout the Process

- When keyboard is displayed, the input field with focus will **always** be in view. If possible the following line will also be displayed so the user knows what follows. Input remains at the same plane as much as possible.

- The app will format fields saving the user from switching between keyboards for symbols etc. App will also display correct keyboard for the field. Numeric for phone, text for address etc.
- !

Errors & Warnings:

- Real time validation with feedback.... Errors or warnings to appear directly below field affected.

Password:

Any combination of letters & numbers

Error Message Appears here
- 1

Drop down – choose from same as Personal, New or enter corporate account number to populate. The address fields will dynamically display depending on selection.

2

Address information will follow the same process as personal address... app will attempt to do as much work as possible.

3

Account number is dependent on payment type. Will also display appropriate keyboard.... For example, if type is a credit card, the numeric keyboard will be displayed and the account numbers will be grouped as displayed on the card for easier recognition.

4

Expiry date will be a date picker.... Month | Year

5

Navigation

- Navigation shall work similar to Personal information.

- 'Back' will display an opportunity to save,

- 'Done' will appear once all fields have been completed.

Payment information does not need to be completed to use the app. If the user chooses to purchase services, there will be a checkout process where payment information can be given. A option to save information to profile will be given at checkout.

REGISTER NEW USER: COMPLETED

- 1** Tapping 'Done' will bring the user to two confirmation screens.
- 2** User can navigate out of the registration process with an option to save.
- 3** First step in confirmation... user can opt-out if desired
- 4**

Last step in confirmation

 - User can add as a contact. Contact information is available to the user in familiar method with access through Bluetooth etc that is not available at the app level.
 - Feedback to the user that registration has been successful or not. In case there is a network issue this will display a message that attempts will be made while the app is running or next time the app is opened.
